

Monitor Products recently welcomed Andy Logan as a partner within the company and the V.P. of Sales & Engineering.

Andy brings 25 years of experience to Monitor Products including a background in engineering, sales and overall business development. His experience includes 10 years at MerCruiser where he served as the lead engineer for MerCruiser's exhaust and cooling system product lines.

Over the past 15 years Andy started and developed several successful businesses most recently including a consulting business providing product design and development services to both domestic and international clients.

"This is an exciting addition to our team at Monitor Products looking long-term as we expand our customer base while continuing to provide the most innovative, cost effective and customer focused heat transfer product solutions," said Carl Sunden, founder and president of Monitor Products.

"With his business development experience, and hands-on design skills we're confident Andy will play a strategic role in expanding and deepening relationships not only in our key market areas, but also in growing new markets as well."

Monitor Products was founded on Long Island in 1979 and relocated to Brooksville, Florida in 2001 after constructing a new 26,500 square foot custom facility specifically designed for heat exchanger manufacturing.

Monitor is an ISO certified manufacturer of heat transfer products to various OEM's throughout the marine industry.

Monitor Products is widely known for partnering with their customers to provide superior technical support and overall product quality.
